Syntax

MONYYw.

Syntax Description

w

specifies the width of the output field.

Default: 5

Range: 5-7

Details

The MONYYw. format writes SAS date values in the form *mmm*yy or *mmm*yyyy, where

mmm

is the first three letters of the month name.

yy or yyyy

is a two- or four-digit integer that represents the year.

Examples

The example table uses the input value of 15415, which is the SAS date value that corresponds to March 16, 2002.

SAS Statements	Results
	----+----1
put date monyy5.;	MAR02
put date monyy7.;	MAR2002
